

Welcome — AI workshop

Michal Lison · 2026-05-20

- Hands-on — laptops out, we build things
- Three breaks; longer one mid-day
- Interrupt anytime — questions, tangents, "wait, what?"

Repo: <https://github.com/mlison/ai-workshop-public>

Today

- Module 3 — Team context
- Module 4 — Advanced workflows
- Module 5 — Discipline
- Module 6 — AI in CI/CD

Three breaks. End at 16:00.

Module 3

Team-level Context Engineering

50 minutes

Making AI consistent across your team

Same vocabulary. Same standards. Same conventions.

The ceiling on team productivity isn't model intelligence — it's how clearly you can collectively express how you work.

Three layers of team-level context

1. **Persona / communication** — how the agent talks. Direct or cushioned. Push back, never flatter.
2. **Process / workflow** — how work gets done. Plan-first. PR conventions.
3. **Project conventions / standards** — file naming. Library defaults. What to never use.

The maintenance rule

AGENTS.md — how we work

doc/ — what the system does

Update each when its concern changes.

Without the rule, both rot.

Team AI configuration

AGENTS.md — always on

.skills/ — task-scoped, invoked

.prompts/ — reusable canvases

All three versioned. All three reviewed in PRs.

Critique: would you ship this?

`modules/module-3/sample/AGENTS.md`

1. What would feel off using this with your team tomorrow?
2. What's missing for a team-level (vs individual) artifact?
3. What rots fastest?
4. What hidden assumption wouldn't transfer to your team?

Coming up: Module 4

- Mob-build an MCP tool.
- Write a skill solo.

`.prompts/` you take home.

10-minute break.
